CREEPING BENTGRASS

TEE 2 GREEN

PRESTIGE
PREMIUM BENTGRASS BLEND

PREMIUM BENTGRASS BLEND

Produced by Oregon's top growers, Tee-2-Green bentgrasses far exceed the standards of general certified seed. Our seed is free of Poa-annua, Poa-trivialis, and all other noxious and unacceptable weed seeds.

Because performance matters, we've blended our two highest performing Tee-2-Green bentgrasses to bring you **Prestige** premium bentgrass blend. This proven blend of Pure Distinction and Pure Select bentgrasses provides tour-quality surfaces on a day-in and day-out basis, even in the harshest climates.

Every golf course has microclimates that all perform differently; with **Prestige**, we have you covered! Whether seeding a new green or interseeding, this blend gives you super dense, up-right, aggressive growth and exceptional ability to compete with poa-annua. **Prestige** premium bentgrass blend provides you the power to overcome disease, shade, salt, and whatever mother nature has planned.

Prestige Premium bentgrass blend benefits include:

- Extreme heat and cold, wear & frost tolerance
- Great Shade & Broad Spectrum of Disease Tolerance
- High Salt Tolerance
- High tolerance to Poa annua herbicide
- Super deep rooting with fast recovery
- Super Spring Green up, late fall color & vigor
- Striking medium green color
- Tour quality putting surface with high-density canopy

Prestige Premium Blend is ideal for greens, collar and approaches.

Recommended seeding rate is 0.75 to 1.50 lbs./1,000 sq. ft. for new plantings and 0.25 to 1.0 lbs./1,000 sq. ft. for interseeding.

MANAGEMENT PRACTICES THAT HAVE PROVEN SUCCESSFUL ON

CREEPING BENTGRASS

MAINTENANCE PROGRAM

Tee-2-Green creeping bentgrass varieties are tough and hearty, requiring less water and fertilizer than other creeping bentgrass varieties, typically resulting in an easier management regimen for the superintendent. Properly maintained, they provide a very high-quality playing surface that thrives on low mowing and results in excellent playability.

In general, the amount of fertilizer applied should be 50 grams of nitrogen per 100 m2. every 14 days +/-, depending on approximate growth, clippings, and performance. The yearly amount of nitrogen will be from 1 to 2 kg., phosphorous 1 to 1.5 kg., and potassium 3 to 5 kg. As far as micronutrient amounts, this should be checked via tissue tests during the growing season and again with a soil test in early spring.

TYPICAL MAINTENANCE PROGRAM

Grow-in

Wait until there is uniform turf coverage, with a height of 16 mm, before the first mowing. The mower should have a smooth front roller, not a grooved, at this time. Clippings should not be collected at this point, as to assist in the establishment of a biomass that will protect the plant from damage. During this early stage, apply light weekly topdressing to cover the clippings, then smooth any roughness in the surface to accelerate filling in the turfgrass canopy. The turf should reach the desired mowing height in six to seven weeks after the first mowing.

Fertilization

After the turfgrass has grown in, fertilizer applications should be kept light and infrequent and can be accomplished by using a fertigation system or a soluble product. Only irrigate when necessary. To fill the soil profile to field capacity or to flush salts from the soil profile, stretch the time between irrigation cycles as long as possible. This will vary according to the time of year, but it is possible to go up to 10 days or longer, only hitting hot spots if required.

Aeration

Aeration needs will vary from course to course based on soil type, traffic, and growing conditions. Most golf courses aerate two to three times a year — typically in the spring, early summer, and fall.

Topdressing

Topdressing varies depending on management style, ranging from light, weekly applications to once a month when verticutting. As with all bentgrass get as much topdressing into the playing surface as possible by opening up the canopy using groomers, verticutting, grooving, or spiking.

These grow-in fertility recommendations for greens are provided as a general guideline and should be adjusted for your specific climatic conditions and other possible objectives.

GROW-IN FERTILITY PROGRAM GREENS

GREENS:	Anderson Product #		Rate/ 1000 sq ft
Pre Plant:	10006195	Contec DG 12-24-8 50% MUtech	6# (6.25)
	10006157	A-TEP Micronutrient package	12#
